

## Lightened collision mat

The lightened collision mat, made of a fiber felt 10-12 mm thick, is used for temporary repair works of large hull breaches. The backbone of the mat is fiber felt 10-12 mm thick, covered on both sides with a special boiled sea canvas with waterproof impregnation. The stiffness is created by strain frames 2.8 x 20.0 mm.

The frames of the mat should be arranged horizontally - they prevent the mat from being pressed into the hull breach.

The planting of lightened collision mat and tightening of its rigging is made by pulley hoists with a lifting capacity of 1 ton.

Delivery set: protective cover, iron cramps, snatch blocks, lowering lines, keel hauling lines, swiveling pulley hoists with can hooks.

The product complies with SOLAS.

### Specifications:

- Size - 3.0 x 3.0 m (Canvas layers - 2 pcs,; Interlayer - 1 felt padding)

Product code: 1611101100
