

## Measuring hand line

Measuring hand line produced by MARKO Ltd is used to measure depth from a vessel. It consists of a reel, a plummet and a polypropylene rope with depth marks.

The depth is easily determined by the orange-colored tags with markings sewn into the hand line every 5 m. Black stamps are sewn every meter. The 5 meter mark is indicated by a round hole, and the 10 meter mark is indicated by a dent on the tag.

Thus, the depth is determined by the combination of dents and round holes on the tag.

You can buy measuring hand line from a warehouse in Odesa. We issue Quality assurance certificate for each product.

### Specifications:

- Length of the measuring hand line - 50 m;
- Material of the measuring hand line - 3-strand polypropylene rope, wooden fleeting wheel, leather depth marks;
- Plummet material - galvanized steel;
- Plummet weight - 4 kg;
- Total weight - 7 kg;
