

Davit crane for liferaft - D-RC

Product code: 1510106100

The system is suitable for launching by gravity and recovery of liferafts, including complete equipment and launching crew, by electric or manual drive.

In case of multi-raft handling, the winch drum has a special "quick return" function for fast hoisting of the empty hook.

The davit arm is manually brought to the outboard embarkation position by using a worm gear.

A remote control for the requirement to initiate lowering from inside the raft is installed.
